

7 Sound Reasons Why You Need Managed IT Services

As much as companies want to keep business processes in-house, if you want to reach the summit of your industry, you're going to need some help.

Think of your organization as a solo climber summiting Mount Everest. Are you really going it alone? The simple answer is no. Someone is there to provide you with guidance, protection, and security and to ensure your success. Managed IT works in much the same way.

Many organizations still think that going it alone is the best option, but that, unfortunately, puts your organization in a silo, secluded from the help that's available to assist your company to the top.

When it comes to managed IT services, consider Clare Computer Solutions as your partner. Clare Computer can take care of your day-to-day IT needs so your leadership and employees can focus on growing business and ROI.

Here are 7 benefits of Managed IT:

1. Access to the Latest Technology

It's hard to keep up with old equipment. Clare Computer will audit your network infrastructure and replace or upgrade any hardware or software that's out of date, including computers, laptops, printers, servers, storage, and more. We'll ensure your systems and processes are up to date and performing as intended while keeping an eye on the future for new and improved technology solutions.

2. Security

With our managed IT services, Clare Computer provides 24/7 monitoring with risk assessment and response to ensure your critical data is protected from hackers and other threats, including intrusion attempts, viruses, and spam. We also protect your hardware, edge devices, and mobile devices, managing firewalls and patching detected vulnerabilities while supplying another level of security across your technology ecosystem.

3. Increased Efficiency

With your network and systems running smoothly and securely, your company can greatly reduce downtime caused by technological issues. With remote support from Clare Computer, we resolve issues quickly through remote access, with minimal to no disruption to business operations. We'll also streamline processes to further reduce redundancies and optimize resources to the business goals of your organization.

4. Scalability

Scalability is key to the efficiency of your processes and systems. With the quick rate that technology advances, in order to save time, processing power, and money, you'll need to seamlessly adjust to demand. Clare Computer will manage your systems, scaling up for times of high demand and lowering the power output during low demand, to provide efficiencies in computing time while lowering overall energy needs.

5. Automations

With automations now able to perform both menial and complex tasks performed in the past by human workers, organizations can have their employees focus on the core aspects of business. From automated file transfers, purchase orders, and claims processes to customer-facing portals, chatbots, and employee onboarding, automations take care of the busy work within your organization that used to take up employee time and drag down workplace efficiency.

6. Cost Savings

Beyond the efficiencies achieved within the workplace, by outsourcing managed IT services, your organization can save on overhead costs by reducing the amount of on-premises IT personnel. By implementing regularly scheduled maintenance, we help eliminate downtime and equipment failures. We also have a high volume of purchasing power, which can lead to discounted pricing on hardware and software for your organization.

7. Expertise

We have the expertise ready to jump in and the awards and accolades to prove it. With over 30 years of experience in the tech industry, we pride ourselves on being a one-stop-shop for all your managed IT services needs.

Clare Computer IT professionals are available to augment your staff or handle all your IT needs. With expert-level experience in security, cloud computing, and data backup and recovery, we help your organization avoid costly mistakes with your systems and processes while driving overall savings with increased support.
